RV and JH13PN

Plug-in type annunciator relay units RV and JH13PN

■ Description

RV series are plug-in octal base-type relays designed for modular use. They combine the necessary functions for annunciator systems and simplify the connection to bells, buzzers, alarm lights, flicker relays and lamp test pushbuttons, etc. in alarm systems. Alarm systems require many types of annunciators i.e. alarm lights which flash on and off, or which light in the case of trouble, and trouble pilot lamps with a MEMORY. Thus the relay unit varies according to its usage and the type of annunciator used. FUJI can supply a wide range of relay units to meet the needs of clients. A flicker relay JH13PN is now available. Schematic diagrams of alarm circuits can be supplied.

■ Features

- A relay unit is available to match your alarm system and to permit a simplified circuit.

Type (Ordering code)	JH13PN-□ (RF1-□)	
Coil	Rated operating voltage	100-110/200-220V AC, DC (selectable) 24, 48V AC/DC
	Operating voltage range	85 to 120% of rated voltage
Output contact arrangement	SPDT	
Flickering period	600msec.	
Contact rated thermal current	6A	
Insulation voltage	250V	
Mechanical durability	10 million operations	
Ambient temperature	-10°C to +40°C (no icing)	
Insulation resistance	100MΩ at 500V DC megger	
Dielectric strength	2000V AC rms 1 minute between control circuit and contact 1000V AC rms 1 minute between open contacts	

Note: Enter the operating coil voltage code in the □ mark as follow:
 24V AC/DC:CE, 48V AC/DC:CF, 100/110V AC/DC, 200/220V AC/DC:CH

- We can supply 10 different kinds of relay units which meet every situation.
- The compact design allows density mounting and so even if a number of units are installed together the space they occupy is small.
- Low power consumption
- The contact has a rated thermal current of 3 Amps.
- Highly dependable and trouble-free Relay units use the highly dependable FUJI miniature relay HH54B.
- Either lock or non-lock systems are available.
- Relay has a dielectric strength of 2000V AC for 1 minute.
- Alarm input contacts can be either normally open or normally closed.
- With surge suppression device Surges are suppressed by a surge suppressor. Therefore high sensitive relays or semiconductors can be connected to an annunciator circuit without malfunctions or damage.
- Available for uses input and output circuits in opposite polarity.
